Avoid the dreaded head lice with Linicin Prevent Spray

**HALF
PRICE**
NOW ONLY €3.99
(RRP €7.99)

Tips on how to treat head lice:

- Only treat hair that is infected - products used to treat head lice do not prevent the infection from occurring and should never be used as a preventative measure.
- Treat immediately - As soon as you discover lice or eggs, treat the child as soon as possible.
- Follow the instructions - always follow the instructions on the treatment pack and any advice given by your pharmacist. Never leave the product in longer or double the dose of the product.
- Repeat the treatment - treatment should be repeated after seven days to kill any eggs that may have hatched in the meantime.
- Check the success - check if the treatment has worked by detection combing on day two or day three after completing a course of treatment, and again after a further seven days. Treatment can be judged successful if no lice are found during both checks.
